PERSONAL PROFILE

Third-year Computer Science student with industry experience at CliniSys, resolving 800+ technical support tickets and using SQL to investigate application issues. Combines practical IT experience with projects in cloud applications, machine learning and full-stack development. Interested in applying technology to business challenges, with strengths in problem-solving, collaboration and communicating with technical and non-technical audiences.

EDUCATION

University of Surrey

BSc in Computer Science - predicted 2:1

Expected Graduation: June 2027

- Relevant Coursework: Computer Networks, Operating Systems, Databases, Software Engineering, Cloud Computing, Programming, Data & System

SKILLS SUMMARY

- **Programming and databases:** Python, JavaScript, SQL, T-SQL
- **Data and machine learning:** pandas, scikit-learn, data cleaning, exploratory analysis, forecasting, classification and model evaluation
- **Software development:** React, Node.js, Express.js, FastAPI, Firebase, REST APIs, WebSockets, Git and GitHub
- **Cloud and IT :** Microsoft Azure, Microsoft Entra ID / Azure AD, Microsoft 365 administration, access management, networking fundamentals and troubleshooting
- **Tools:** Streamlit, ServiceNow, VS Code access control.

WORK EXPERIENCE

Support Engineer

Clinisys

Woking, Surrey

May 2025 – June 2026

- Resolved 800+ technical support tickets across user support, applications, security and engineering, prioritising issues by urgency and business impact.
- Used python scripts to investigate application issues, validate information and support troubleshooting of business-critical systems.
- Assisted with Microsoft 365 user accounts, permissions and access management, following security and operational procedures.
- Collaborated with users, engineers and application teams to investigate problems, explain solutions and coordinate issue resolution.

Student Ambassador
University of Surrey

Guildford, Surrey
May 2023 – present

- Delivered 15+ presentations explaining technical modules and projects to prospective students and non-technical audiences.
- Engaged with 300+ prospective students and parents, identifying their questions and tailoring explanations to their interests.
- Supported event coordination for 1,000+ attendees, managing schedules and working with colleagues to keep activities running smoothly.

PROJECTS

StockAhead — Retail Forecasting (*Python, pandas, scikit-learn, Streamlit*)
Personal Project

- Built an interactive application forecasting weekly sales for 20 products and generating replenishment suggestions using simulated inventory inputs.
- Cleaned and analysed a dataset containing 541,909 retail transaction records; compared random forest forecasts with simple baselines using chronological evaluation
- Demonstrated a 19.36% reduction in test mean absolute error using a four-week moving average against the previous-week baseline, and explored stock availability versus inventory levels through adjustable scenarios.

Cloud Based IT support system (*Azure, [Node.js](#), Firebase*)
Backend Lead

- Led backend development and coordinated team contributions for a cloud-based application enabling users to submit, track and resolve IT support tickets.
- Developed backend APIs and designed the database structure to manage users, tickets and workflow status.
- Implemented Azure AD authentication and role-based access control, and deployed the application using Azure cloud services.
- Developed a dashboard tracking ticket resolution times and issue categories to support monitoring of IT support performance.

Formula 1 Data Dashboard (*React, Python, FastAPI, pandas, Chart.js, WebSockets*)
Personal Project

- Built a full-stack dashboard replaying historical Formula 1 race data, with lap-time comparisons, tyre performance charts and a selected-driver leaderboard.
- Connected a React frontend to a FastAPI backend using REST endpoints and WebSockets, with start, pause and reset controls.
- Processed historical race data using FastF1 and pandas, handling missing lap times, excluding pit laps from pace charts and caching sessions to speed up subsequent loads.

CERTIFICATIONS & TRAINING

- **Microsoft Azure Fundamentals - AZ 900**
- **Microsoft Azure AI Fundamentals - AI 900**
- **IKEEP Intrapreneurial Knowledge Exchange Enterprise Pathway**
